## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3, 12, 16 and 38 are rejected under 35 U.S.C. 102(e) as being anticipated by Maydan.

Maydan shows apparatus which comprises a plating cell, (Figures 18, 19), an aperture for delivering a plating fluid onto a workpiece surface. The reference shows a "flow diffuser" (71) which is disposed in the cell such that fluid emanating from the aperture must pass through the "flow diffuser" such that there is a flow pattern such that the plating fluid exits the flow diffuser at a substantially the same velocity across the entire surface. (See page 13, paragraph (0111)).

The reference does not use the language "diffuser membrane".

However, the examiner is construing the "flow diffuser" of the reference as being the functional equivalent of a "diffuser membrane".

As for claims 2-3, the structure shown by the reference, inherently includes anode and cathode connections. The tilted orientation would be considered inherent to the normal level of a fluid at rest, namely zero degree tilt.

#### ***Allowable Subject Matter***

3. Claims 4-11, 13-15, 17-37, 39-60 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: The references of record do not show or suggest a plating cell with a diffusion membrane which is made of a material having a pore size of between about 1 to 200  $\mu\text{m}$ .

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Toyoda et al show a plating cell with a filter between the anode and cathode.
